

Polaroid Macro 5

A dental camera that's as simple, versatile and precise as the tools you use every day.

Designed by dentists. Designed for dentists.

With five magnifications built in: 0.2x, 0.4x, 1x, 2x and 3x, the Polaroid Macro 5 lets you take full-face and extraoral photos simply by turning a dial. Set the Macro 5 to 0.2x or 0.4x for great head-and-shoulders or full-face pictures to show patients before-and-after results. Click to 3x for incredibly close anterior photos of teeth and gums to help your lab accurately match veneers and build prosthetics. Choose 1x or 2x for showing patients their progress during the tooth whitening process. With the Macro 5, you get every shot - all from one camera, all in one simple step.
